Doctors and surgeons spend more than 30% of their time with repetitive administrative and documentational tasks - valuable time that is missing to treat patients. We are on the mission to remove complexity and automate medical procedures to let physicians focus on what really matters: Making patients smile!

Therefore, we integrate advanced ML technologies with smart visualizations of medical data to enable an incomparable powerful semi-automation of medical procedures. Join us on our mission, develop the latest tech and bring it to the hands of physicians.

You have a passion for building truly secure and large-scale applications and you like to take challenges, be responsible, and unfold your creative and entrepreneurial mindset? Then you're right!

At the moment we are primarily looking for:

- Excellent knowledge in building, deploying and improving ML / DL models and algorithms
- Experience in medical imaging and familiar with DICOM files
- Good knowledge of Python and common ML / DL libraries and tools

Interested? Then send us a short e-mail with max. ten sentences "why you" and your CV to:
